ID: 8092

If Kaspersky Anti-Virus 2012 or Kaspersky Internet Security 2012 is installed on your computer, then you can quickly record Kaspersky Rescue Disk 10 via the application interface. Kaspersky Lab 2012 products have a special tool which allows creating and recording Kaspersky Rescue Disk.

In order to record Kaspersky Rescue Disk 10 to a removable USB device, perform the following actions:

1. Connect a removable USB device to your computer

 In order to successfully record Kaspersky Rescue Disk 10 to a removable USB device, space capacity of it must be not less than 256 MB. The connected USB device must have FAT16 or FAT32 file system. If NTFS file system is installed on the device, you are required to format it in FAT16 or FAT32.

 Do not use an USB device with other operating systems installed on it. It may cause incorrect booting your computer from Kaspersky Rescue Disk 10.

2. Download the iso image of Kaspersky Rescue Disk 10 and a special utility

Download the following utilities from the official Kaspersky Lab server:

1. [Iso image of Kaspersky Rescue Disk 10](#) (237 MB)
2. [Utility to record Kaspersky Rescue Disk 10 to USB devices](#) (378 KB)
