Autoplay Problem mit Itunes

Quelle: http://www.geekstogo.com/forum/topic/259442-autoplay-issue-with-iphone/

Next, try this:
1. Click the Start button Picture of the Start button, click All Programs, click Accessories, and then right-click Command Prompt.
2. Click Run as administrator.
3. At the UAC windows please press continue.
4. At the command prompt, type net start shellhwdetection, and then press ENTER.
5. Restart your computer.
6. After reboot try plugging in your iPhone again. Without the Shift key.

   1.) Try going to Computer and looking for your iPhone when it is plugged in. If there is not a drive letter, there can't be an autorun.

      2.) Make sure there is pictures on your iPhone. Windows will not detect anything unless there are pictures for it to find.

Yes, AutoPlay opens when a drive is inserted. If there is no drive opening, no AutoPlay will be shown.

1.) Plug your iPhone in.
2.) Start>Control Panel>Administrative Tools>Device Manager.
3.) Find your iPhone on the list, if iTunes is finding it, it has to be somewhere. Most likely in Disk Drives.
4.) Once you have found your iPhone, right-click and choose Uninstall
5.) Press "Ok" and let in install
6.) Unplug and plug it back in.

It's fixed! It was the driver as you suspected. **I had tried reinstalling the driver a few times before and it didn't work**...I noticed this time, though, that there is a box that you have to check in vista in order to actually delete the driver, not just uninstall it. Oh, vista...thank you so much for all of your help, I really, really appreciate

man thanks alot...i was having same problem it happn when i install one theme from cydia and it was having a bug so after installing it i never get that autoplay popup but i can sycn in itunes...than now i gone thru this site and ur valuable post...i resoved my iphone issue....thanks once again ..i actually register to this site to thanks to u dude...
